SUMMARY

I'm seeking opportunities in software development and for a position that welcomes motivation while simultaneously offering a supportive environment and allow me to benefit your organization by utilizing my skills in a way I can contribute and grow professionally. I'm open to full-time work, remote work, and using new technology stacks.

TECHNICAL EXPERIENCE

Projects

- **MoneyDashboard** is a full stack application that utilizes React, Javascript, Node, MongoDB, Passport, and Express. Users can create an account and sign-in. Users can enter transaction data, budget data, and debt data and see an overview of their finances.
- **Jobbie** is a web application using the MERN stack. Users can view and search all job listings and employers can create an account and submit their own job listing for free. Node for the back-end, Passport and JWT for authentication, MongoDB for the database and React to display all the data.
- **CityLife** is a web application pulls data from Teleport's API that allows users to compare two different cities and see the quality of life between them. CityLIFE is built in React.
